

Policy Statement on the Drug Quality and Security Act

We commend the bipartisan leadership in the House and Senate to ensure the safety of the nation's drug supply.

The Drug Quality and Security Act effectively addresses the threat to public health resulting from unsafe drug manufacturing by compounding pharmacies. This legislation gives the Food and Drug Administration the needed authority to effectively oversee drugs manufactured in the U.S.

We urge Congress to enact this legislation to protect patients and families from injuries and deaths. We believe this legislation is critical to protect the public health from unsafe drugs while preserving the ability of patients' to access compounded medicines when medically necessary.
